conexiom

Eliminate the Manual Entry of Sales Orders, Invoices, and More

SAP

Conexiom® Integrates with SAP® to Automate
Document Processing with 100% Accuracy

In any given enterprise, approximately 49% of purchase orders are received as emailed documents and must be manually entered into the SAP® ERP system, typically by a customer service representative (CSR).

This tedious task wastes time, creates errors, and distracts CSRs from value-add, customer-focused work.

Conexiom creates unprecedented operational efficiencies that reduce costs and errors and improve service levels by automating your orders and instantly transforming business-critical documents into touchless transactions in SAP with a direct integration or through your chosen middleware provider.

A Perfect Match

Companies choose Conexiom because it:

▸ Is purpose-built technology for automating emailed documents into SAP ERP systems

▸ Has deep experience across SAP customers, including successful global deployments for some of SAP's largest distribution and manufacturing customers

▸ Simplifies user experience by replacing complex SAP order-entry screens with automated touchless order entry or simplified exception handling in an intuitive, easy-to-use UI

▸ Has configurable integrations for moving data into and out of SAP

▸ Automates the processing of complex, unstructured data and converts it into 100% accurate structured data without human review and validation

Millions of transactions flow through Conexiom to SAP ERP customers, including Honeywell®, Diversey™, Dupont, Dow® and Grainger®.

## Integrations that Support Simple to Sophisticated Approaches

- ✓ **Certified Integration via SAP PI 7.5 to SAP ECC 6.0**
- ✓ **Integration to SAP S/4 HANA**
- ✓ **SAP IDOC XML ORDERS05**
- ✓ **IDOC XML ORDERS03**

- ✓ **EDI**
- ✓ **ConexiomXML**
- ✓ **Custom API**
- ✓ **Custom Flat File**

- ✓ **Rest or SOAP APIs to published SAP APIs**
- ✓ **Rest or SOAP APIs to APIs surfaced by the client via middleware providers (Boomi, Mulesoft, SAP PI Server)**

Use Cases and Implementation Considerations

If You Want to...	Conexiom Delivers...	Considerations
Use an existing EDI integration to SAP	EDI 850	Low complexity, exception handling in ERP or EDI
Import a flat file via SFTP to SAP	Conexiom XML or Custom Flat File	Uses customer ability to consume an asynchronous file
Import order via IDOC	SAP IDOC XML or IDOC Flat File	Uses SAP ECC 6.0 standard order via SFTP or another gateway
Use an SAP Certified Integration	SAP IDOC via PI Server for Order Create	Certified on SAP Process Orchestrator 7.5 for ECC 6.0
Do more sophisticated exception handling in Document Validator	SOAP or Rest API calls to middleware layer	Requires client to expose interfaces via middleware or web services gateway. Also requires client to surface RFC and BAPI business logic that can be consumed by the integration gateway
Integrate Conexiom with S4/HANA	Rest API calls to SAP supported APIs	Refer to api.sap.com for current list of supported APIs by platform

Specific examples include the ability to surface inventory availability, validate a bill-to address, check customer number, check if PO is duplicate, or validate UOM for an order, as examples.

Add Value to Your SAP Investment

Conexiom is committed to delivering value for SAP customers.

- Conexiom will be an active SAP partner
- Actively maintain a role in SAP user groups to hear directly from customers
- Publish a set of REST APIs that demonstrates how Conexiom can pass data for Orders or Order Create (existing BABIs in SAP ECC 6.0) to place an order
- Publish a set of REST APIs that demonstrates how Conexiom will request information from SAP to improve order entry and exception handling in Conexiom applications versus native SAP screens

"The integration with SAP is solid. It slotted in well with processes and has improved our order entry time greatly."
